

FISH-LAMP

Coloured wall lamp, made with motorcycle heat covers, to be used as a set

FISH-LAMP

The FISH-LAMP lamp was born with the discovery at a scrapyard of interesting parts such as heat covers of scooters silencers. After having cleaned them clean them I looked for an alternative design and a new and eye-catching function, with the shape has definitely suggesting something marine and aerodynamic. I opted for a wall lamp unit, inspired by electric fishes which emit light. And thus the fish-lamps were created, to be mounted in a vertical or horizontal sequence as two colorful fish. The tails are made from kitchen ladles, while the eyes are ball bearings.

Wall-mounted fish-lamps
