

MARBLE-LAMP

Column standing lamp built
with a statue pedestal and
used washing machine
baskets

MARBLE-LAMP

This lamp, created in collaboration with Simun, has been developed by looking for solutions for the use of a beautiful marble pedestal abandoned for a long time. After several hypotheses to couple it with a metallic element of industrial manufacturing, the idea was born to use washing machine baskets. They have already shaped round and hollow, which is precisely what light needs: to seep out softened and diffused through a lampshade design. The steel basket, made as in its own right, is rich in features and well-balanced as a whole; this helps to make the lamp unique and refined, also for the contrasting combination of the materials chosen.
